

CENTRE ORAL & FACIAL SURGERY

GREG KEWITT DMD, MD, FACS

INSTRUCTIONS FOLLOWING A SINUS LIFT

Please read this handout carefully and keep it as a reference for after surgery. Every surgical procedure is different, so not all of the instructions may apply. Common sense will often dictate what you should do. When in doubt, or if you have any questions not addressed below, please do not hesitate to call.

What to Expect

Following surgery, you may experience a numbing feeling in your cheek, upper lip, or gums. This can last from several days to weeks. You may also experience some sinus congestion for the next several days to weeks.

Certain precautions will assist healing and we ask that you faithfully follow these instructions:

- **Avoid** forcefully spitting or blowing your nose for the next 10-14 days. If you need to blow your nose, do it as gentle as possible.
- **Try not to sneeze.** It will cause undesired sinus pressure. If you must sneeze, keep your mouth open.
- If you experience **sinus or nasal congestion**, use a decongestant nasal spray, but prudently. You should not use the nasal decongestant sprays (i.e. Afrin) more than two times per day.
- Take all medications as prescribed.
- Do not smoke.
- Do not use a straw.

Bleeding

You may experience a small amount of bleeding or drainage of blood from your nose. Do not be alarmed if this happens. If severe nasal bleeding occurs, call the doctor immediately.

Please remember that your follow-up visits are very important.
